

# Unexploded Ordnance (UXO) Risk Assessments for The Construction Industry

In the UK UXO contamination on land is principally the result of either Second World War German bombing or historic Allied military activities including former airfields and defensive structures.

To support our clients in the early stages of a projects' lifecycle, Ordtek provides a range of desk based products designed to transparently and robustly establish the level of UXO risk and then, if required, succinctly outline a mitigation strategy to deal with the potential hazards.

## Preliminary UXO Risk Assessment from only **£145** + VAT

*Includes:*

- A digital PDF copy sent within 24 hours
- Based on comprehensive research from numerous archives
- Screens out 80% of UK sites
- Clear and unbiased recommendations

## Detailed UXO Risk Assessment from only **£850** + VAT

*In addition to the Preliminary, includes:*

- Semi-quantitative risk assessment
- ALARP test to determine risk tolerability
- Risk mitigation strategy

*All Ordtek UXO Risk Assessments conform to the CIRIA C681 Guidelines*
